

## Lecture - 7

### Gemini Code Assist Course

→ Improving UI

→ UI from dribbble

Improving the UI-

Refactor all Flask templates to use a professional, consistent UI.

- Create a base.html with navbar, flash message section, and responsive layout (Bootstrap/Tailwind).
- Update all other templates to extend base.html and use {% block content %}.
- Style forms, tables, and buttons consistently.
- Ensure responsiveness across desktop and mobile.

← Prompt

UI from dribbble-

Use the provided screenshot as the design reference.

Update all Flask templates (index.html, add.html, edit.html, view.html, etc.) so they share this professional UI.

Requirements:

- Create a base.html with navbar, footer, flash message section, and responsive layout.
- Make all templates extend base.html and adapt their content to match the design from the screenshot.
- Ensure consistent styling for forms, buttons, and tables.
- Follow the screenshot's colors, spacing, and typography for a polished, modern look.
- Make the design fully responsive for desktop and mobile.
