

Lecture - 6

Gemini Code Assist Course

- Iterative Refinement
- Add features for update, delete

Iterative Refinement-

Create a button at the top with the text "Add an Expense"

- Modify the front end logic in the `@templates/index.html` file: Add this button at the top above "All Expenses" and below the header "Expense Tracker"
- Modify the backend logic in the `@app.py` file: Clicking on "Add an Expense" button should open a new route "/add" with the form capturing all the fields of the expenses (title, description, amount, category (Food, Travel, Utilities, Others) in a drop down, spent_on), allowing user to create an expense. Create a template `@templates/add.html` showing all these fields to handle the creation of an expense.

Prompt

Add features for Update, Delete -

Create two buttons "Edit", "Delete" below "Actions" in the `@templates/index.html` file for each expense

- Modify the front end logic in the `@templates/index.html` file: Add these buttons below "Actions" in the `@templates/index.html` file for each expense
- Modify the backend logic in the `@app.py` file: Clicking on "Edit" button for an expense should open a new route "/edit" with the form capturing the following fields of an expense (title, description, amount), allowing user to edit an expense. Create a template `@templates/edit.html` showing all these fields to handle the editing of an expense. Clicking on "Delete" button for an expense should delete directly that expense.

Prompt
